

Hint Card

The temperature scale is reversed – it starts with the hottest temperature (left) and decreases in temperature to the coolest (right)

Hint Card

The luminosity scale is in solar luminosities (1 solar luminosity is the luminosity of the Sun). It might help to put the Sun down first (Star 20)

Hint Card

You may find it helpful to divide the graph into the quadrants below:

Hot and Bright	Cool and Bright
Hot and Faint	Cool and Faint

Hint Card

The luminosity axis is logarithmic

Hint Card

In astronomy, colour indicates temperature. Red is cool and blue is hot (the opposite of taps!).
